

# Light is our passion

## 10W 0-10V LED Driver with Smooth Dimming to 1%

#### **ECOdrive**

Programmable digital ECOdrive LED driver providing standard LED fixtures with the smoothest flicker-free dimming to 1% light output, delivering value to any application. The LED driver is compatible with the 0-10V lighting control protocol, and works seamlessly together with LED modules, controls and intelligent luminaire elements.

#### **Product offering**

#### **ECOdrive 161/S**

| Part number (P/N)   | EC0161S3  |
|---------------------|---|
| Product description | ECOdrive, 10W, 0-10V, 1 control channel, constant current, 1x 55V output, side feed, metal square |

#### Features & benefits

| Natural dimming      | Dim to 1%, smooth brightness changes, excellent flicker performance, adaptable dimming curves, configurable minimum dimming level                   |  |  |
|----------------------|---|--|--|
| Symbiosis            | Seamless interoperability with LED modules, controls and in-luminaire intelligent devices   |  |  |
| LEDcode              | configurable design to work with most constant current LED modules and arrays, while providing a connection point to integrated peripheral controls |  |  |
| Programmable         | Fine-tune your driver for any application   |  |  |
| Performance          | Universal input voltage range, low inrush current and total harmonic distortion (THD), high power factor and efficiency                             |  |  |
| Camera compatibility | Hybrid HydraDrive technology is proven to work in TV studios and security camera environments   |  |  |

| Programming interface  TOOLbox pro (TLU20504)  Programming cable set  TOOLbox pro to LED driver, programming cable, 5pcs (TLC03051)  Programming Hand-held, Touch-and-Go  PJ0050HH1  Programming software  FluxTool | Programming tools                   |   |

## Order number configurator

| P/N  | LED driver part number.  |  |  |  |
|--|--|--|--|--|
| LED output current Enter value in 1mA increments, e.g. "811" for 811mA |  |  |  |  |
| Dimming curve  | "LOG" for logarithmic (default)  |  |  |  |
|  | "LIN" for linear   |  |  |  |
|  | "SLN" for soft-linear  |  |  |  |
|  | "SQU" for square.  |  |  |  |
| Minimum dimming level  | Leave blank for default minimum dimming level of 1.0%. Specify in 0.1% increments, e.g. "10.5" for 10.5%.  |  |  |  |
| Start-up performance   | Enter "CA24" for improved start-up performance to comply with ENERGY STAR Luminaires v2.0 and the latest CA Title 24 standard, effective January 2017. |  |  |  |

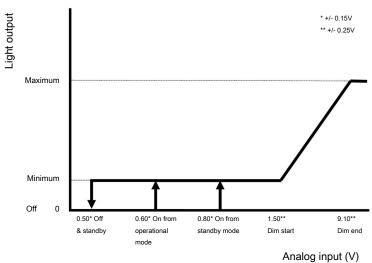

| Input characteristics          |                      |
|--------------------------------|----------------------|
| Nominal input voltage range AC | 120-250V (ENEC)      |
|                                | 120-277V (UL)        |
| Nominal input voltage range DC | 120-250V             |
| Maximum input current          | 0.15A @ 120V / 60Hz  |
| Input frequency range          | 50 - 60Hz            |
| Efficiency at full load        | 81%                  |
| Power factor at full load      | > 0.9                |
| THD at full load               | < 20%                |
| Maximum inrush current         | 30mA²s @ 277V / 60Hz |
| Maximum standby power          | < 0.5W               |
| Output characteristics         |                      |
| Maximum LED output power       | 10W                  |
| Number of LED outputs          | 1 (UL Class 2)       |

| Maximum LED output power 10W          |   |  |  |
|---------------------------------------|---|--|--|
| Number of LED outputs                 | 1 (UL Class 2)  |  |  |
| Programmable LED output current range | 150 - 1,400mA   |  |  |
| LED output type                       | Programmable in 1mA increments within specified current range |  |  |
| LED output current tolerance          | +/- 5% at programmed LED output current                       |  |  |
| LED output voltage range              | 2 - 55V   |  |  |

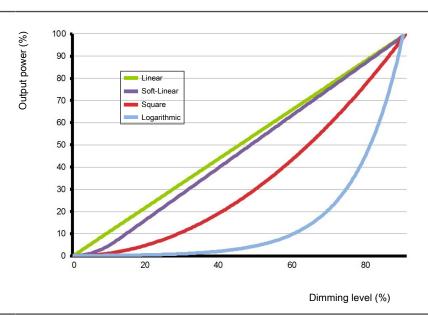

| Control channels      | 1                            |  |
|-----------------------|------------------------------|--|
| Control protocol      | 0-10V, LEDcode               |  |
| Dimming range         | 100% - 1%                    |  |
| Dimming curve options | Logarithmic (default)        |  |
|                       | Linear                       |  |
|                       | Soft-Linear                  |  |
|                       | Square                       |  |
| Dimming method        | Hybrid HydraDrive            |  |
| 0-10V current draw    | <2mA                         |  |
| 0-10V isolation       | to line voltage input: 1500V |  |
|                       | to LED output: 3750V         |  |

0-10V dimming chart

Dimming curves

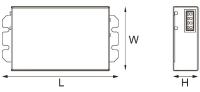

| Environmental conditions                    |   |  |  |  |  |
|---|---|--|--|--|--|
| Operating ambient temperature (Ta) range    | -20 °C to +50 °C  |  |  |  |  |
| Maximum operating case temperature (Tc max) | 67 °C   |  |  |  |  |
| Lifetime                                    | 50,000 hours at a maximum case temperature (Tc) of 67 °C  |  |  |  |  |
| Type TL                                     | @1400mA: Tref 52 °C, max 90 °C  |  |  |  |  |
| LED driver protection                       |   |  |  |  |  |
| Thermal                                     | The LED output current is decreased whenever the internal LED driver temperature exceeds factory preset temperature. The LED output current is increased again once the internal LED driver temperature drops below this internal temperature threshold. If the internal LED driver temperature continues to increase, despite a decrease in output current, the LED driver will shut down. |  |  |  |  |
| LED output short circuit                    | The LED output current is cut off whenever the LED driver detects a short-circuit. The LED driver will attempt a restart every 400ms after a short-circuit is detected.   |  |  |  |  |
| LED output overload                         | The LED driver decreases the LED output current sequentially, until it reaches its maximum rated power, whenever a load that exceeds the LED driver's maximum rated power is connected to the LED output.   |  |  |  |  |
| Reverse polarity                            | The LED driver will not yield any current if the polarity of the load on the LED output is reversed. This situation will not damage the LED driver but may damage the LED load.   |  |  |  |  |
| LED protection                              |   |  |  |  |  |
| Thermal protection LED                      | An external NTC thermistor, which is placed on a PCB near the LEDs, can be connected to the driver via the LEDcode/NTC terminals. The output current to the LEDs is then decreased by 75% whenever the NTC exceeds a maximum allowable temperature, which is specified by the user in the FluxTool software. The default NTC temperature limit is set to 70 °C.                             |  |  |  |  |
| Thermistor value                            | 47kΩ  |  |  |  |  |
| Suitable thermistors                        | leaded: Vishay, P/N 238164063473<br>screw: Vishay, P/N NTCASCWE3473J  |  |  |  |  |

#### LED driver mechanical details

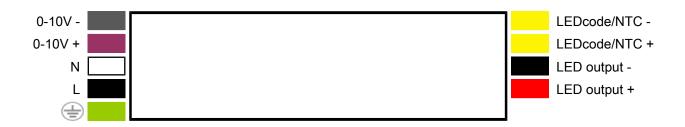

| Length (L)                             | typical: 130 mm / 5.12 in |

| Safety   |  |
|----------|--|
| <u>A</u> | Risk of electrical shock. May result in serious injury or death. Disconnect power before servicing or installing.  |
| <u></u>  | The LED driver may only be connected and installed by a qualified electrician.  All applicable regulations, legislation, and building codes must be observed.  Incorrect installation of the LED driver can cause irreparable damage to the LED driver and the connected LEDs.                                 |
|          | Pay attention when connecting the LEDs: polarity reversal results in no light output and often damages the LEDs.   |
| <u></u>  | LED drivers are designed and intended to operate LED loads only. Powering non-LED loads may push the LED driver outside its specified design limits and is, therefore, not covered by any warranty.  |
| (i)      | eldoLED products are designed to meet the performance specifications as outlined at certain operating conditions in the data sheet. It is the responsibility of the fixture manufacturer to test and validate the design and operation of the system under expected and potential use cases, including faults. |
| i        | Please observe voltage drop over long cable lengths. Longer cable lengths increase EMI susceptibility.   |
| (i)      | Product renderings and dimensional drawings are generic for the housing type.  Product label, connector type and quantity may vary.  |
